

Minutes

Board meeting

DATE

November 30th

TIME

11:00 AM

MEETING CALLED TO ORDER BY

Guilherme Amaral

IN ATTENDANCE

Gabriel Santos, Guilherme Amaral, Francisco Albergaria, João Gaspar

TOPIC

- Doubts
- Microservices
- RabbitMQ
- Pull requests
- Docker
- GitHub issues

BOARD

Defined for Gabriel: The notifications will be regarding each error (generator.py). Gabriel talked about the branches that needed merging. The team created the pull requests that were necessary.

Guilherme wanted doubt clarifications regarding the RabbitMQ.

Guilherme talked about the license plate of cars.

DESCRIPTION

Instead of the database adapter sending the errors to the notification handler, the notification handler can see the errors in adapter. (Message queue). Notification handler for verifying errors. João proposed a solution to Guilherme's problem. Guilherme described a problem that needs to be referred to the teacher, due to, shall we permit the addition of new cars, by generating new ones, or leaving the cars in the database and only being able to create and add cars with corresponding ECU's and license plates, simulating the real world, where you couldn't add a car that didn't exist.

Every time a car is turned on, we need to send a notification, and if it is not authorized it should call the local authorities.

Gabriel reviewed the notes that were taken for things left to do.

TODO

- **Finish all user stories (Priority for now)**
- **Associate backend to front end (All API requests)**
- **TODO - Discord**

NEXT MEETING
