Team Policy

All members of the group are expected to follow the following policies:

- Beware of commits. Always git -status before committing and pushing.
- Always make sure your code is running before committing.
- Commit frequently, large commits are harder to analyze.
- Give constant feedback to pull requests and bug fixes. Be aware of the repository.
- Keep a list of common errors and always test those first (do not delay bug fixes).
- Watch out the branch you commit to, always commit to the right branch, never to main.
- Only commit to main with pull requests to be approved by at least two developers.
- Bug fixing comes first.
- In case of last hour changes/additions, call a Team Meeting if necessary.
- Keep documentation updated, concise and explanatory.
- Keep project backlog up to date.
- When creating a new issue, put it within the correct tag (documentation, enhancement, …) and include a simple and concise title. On the description don't forget to include a detailed description of the problem and objective of the issue.
- Each backlog issue/item title should start with the following, depending on the type:
    - [DOCS]
    - [BUGFIX]
    - [FEATURE]
    - [IMPROVEMENT]
